

Energy

Sensors and heater control units for fuel cell systems

Reliable and precise measurement of relevant parameters of the fuel cell system

Fast and precise measurement

of relevant parameters of the fuel cell system

Inhouse system competence

from a reliable automotive supplier with many years of experience in large-scale production

- Wide portfolio of sensors and heater control units for fuel cell systems, developed based on the experience of many years and millions of sensors in combustion powertrains combined with inhouse fuel cell system knowledge
- Competence from a single source
- Robust in harsh environments
- Extensive experience in the automotive sector
- Established production processes
- Sensors enable compliance with worldwide technical regulations
